AdvaCare Clinics: Chiropractic Care for ADHD Bloomington MN

Attention Deficit-Hyperactivity Disorder (ADHD) is a very common disorder that is usually identified in childhood, which may be outgrown or last well into adolescence and even adulthood. The symptoms are the same at any age and include restlessness, impulsive behavior, lack of focus and difficulty paying attention. All of the above can lead to difficulty in school, at work and in daily life. AdvaCare Clinics, located in Bloomington, MN offers Chiropractic Care as a holistic approach to treating ADHD by naturally balancing the spine, where a great deal of nerve function happens. Many studies have shown that chiropractic care has yielded more positive results than even that of prescription medication.

Medicated Treatment

Studies agree that ADHD is commonly inherited, classified as a neurodevelopmental disorder and research has done a great deal in determining what does not cause the disorder but no one is 100% certain as to what the physical cause of ADHD is...yet the most common form of treatments are stimulant medications and other drugs. There are many debates as to the long term side effect possibilities of the drugs prescribed for ADHD and a long line of concerned parents.

Many Feel a Treatment is Necessary

It can be hard to find a course of action after your child has been diagnosed with ADHD, or even if the diagnosed is you. Many people feel stuck, they want to improve the quality of their child's or their own life now but also want ensure that the treatment doesn't have adverse effects down the road. This is precisely why AdvaCare Clinics offers a safer and less drastic holistic approach to treating ADHD.

A Safer, Alternative Treatment Approach

Medications always come with risks, whether it be allergies, abuse, addiction or another adverse reaction. We feel that there is no reason to completely change a child's, teen's or adult's personality because of the difficulty that ADHD brings. We are happy to offer a natural treatment approach that does not involve potent medication but instead is a gentle, corrective approach that reduces tension in the nervous system, which has been shown to work wonders for people dealing with ADHD.

Boys are at an increased likelihood to be diagnosed with ADHD, by more than double.

Chiropractic Treatment for ADHD

Our licensed and professional Doctors of Chiropractic understand that your child means the world to you and we are dedicated to making a difference in each of our patient's lives, whether adult or adolescent. If you are looking for an alternative ADHD treatment approach, adding on to your current treatment approach or are interested in learning more about how we can help – contact AdvaCare Medical Clinics today for an individual consultation.
